IDEAL CUSTOMER PROFILE & DEMAND ENGINE BLUEPRINT

Legal Soft Lead Engine

Legal Soft doesn't sell staffing. It sells *capacity a law firm cannot buy locally at any price* — and the firms that buy hardest are the ones whose support staff generate no revenue. That distinction, not firm size, is the targeting axis.

Subject legalsoft.com **Prepared** 10 Sep 2026 **Basis** 14 site sections + market data
For Revenue / GTM build

§1 The business, decoded

Founded 2015 by Hamid Kohan. Woodland Hills, California. Seven offices across California, Arizona, Mexico, Ecuador, Colombia, Nicaragua and the Philippines. 1,000+ US law firms served, 2,500 staff placed, 600+ pre-vetted candidates on the bench.

The product is a **dedicated, legal-trained remote employee** — not a task marketplace and not a BPO contract. The firm interviews candidates for free, picks one, and that person starts in under three days working inside the firm's own case management system. A platform layer wraps it: timesheets, live activity screenshots, productivity reports, invoicing, bonuses, and a support ticket queue.

Ten SKUs, priced monthly, month-to-month, no setup fee, with a free replacement if a placement fails.

SKU LADDER · MONTHLY, FULL-TIME · SOURCE: LEGALSOFT.COM/PRICING

ROLE	MONTHLY	CLIENT-FACING?	BEST-FIT WEDGE
Legal Assistant	$2,227	Partly	Generalist entry — solo & small firms
Intake Specialist	$2,227	Yes	Firms buying paid leads; after-hours coverage
Document Collector	$2,227	No	**Lowest-risk first placement.** Zero client contact
Lien Negotiator	$2,227	No	PI firms with settlement-stage backlog
Bookkeeper	$2,327	No	IOLTA / trust accounting hygiene
Case Manager	$2,525	Yes	Family & PI firms with client-update failures
Paralegal	$2,922	Partly	Direct substitute for the unfillable local req
Demand Writer	$2,997	No	**Clearest ROI story in the catalogue**
Marketing Specialist	$2,997	No	Firms already spending on ads
Remote Attorney	$3,323	Partly	Immigration appeals, document review

READ THIS BEFORE WRITING A SINGLE SEQUENCE

The catalogue holds two structurally different products. **Client-facing roles** (Intake, Case Manager) carry accent, trust and bar-rule anxiety — a hard first sale. **Back-office roles** (Document Collector, Lien Negotiator, Demand Writer, Bookkeeper) touch no client and carry almost none of that objection.

Lead with a back-office wedge. Land at `$2,227`, prove the platform, then expand into client-facing seats on the firm's own initiative. Expansion revenue is where the account economics actually live.

§2 Unit economics — and the CAC ceiling they already published

Legal Soft's referral program pays **$2,500 flat on first deployment, or 7% of monthly billing for twelve months**. That is not a marketing detail — it is a published statement of what the company will pay for one closed law firm. It sets the budget ceiling for the entire engine.

The two options also reveal the expected account size. For them to be roughly equivalent, 7% × monthly × 12 must approach $2,500 — implying an anticipated average billing near **$2,975/mo**, i.e. slightly more than one seat.

DERIVED ACCOUNT ECONOMICS · ITALICS = ESTIMATE, NOT PUBLISHED

LINE	VALUE	DERIVATION
Average seat price	$2,600	Midpoint of the ten published SKUs
Implied seats per account	1.15	Back-solved from the referral payout equivalence
Average account ACV	$35,900	$2,975/mo × 12
Bill rate	$12.87/hr	$2,227 ÷ 173 hrs — matches their "$12–13/hr" copy
Delivery cost	*$5–7/hr*	*LatAm / PH legal-trained, fully loaded*
Gross margin	*~50%*	*Implied by the above*
Year-one gross profit	*~$18,000*	*Per account*
Published allowable CAC	$2,500	Their own referral payout
GP : CAC at that ceiling	*7.2 : 1*	*Year one only, before expansion or retention*

The headroom is the point. An engine can spend **$1,500–2,500** to acquire a firm and still return better than 3:1 in the first year alone. That funds real data, real research, and a human SDR on the highest-intent accounts — none of which a $200-CAC business could afford.

§3 The ICP axis: fee model, not firm size

Every competitor in this category segments by practice area and headcount. Both are proxies. The variable that actually determines whether a firm can buy is **how the firm bills**.

In an hourly firm, a paralegal is a *profit centre*: the firm pays $35/hr and bills the client $150/hr. Replacing that person with a $13/hr offshore paralegal whose time cannot be billed at the same rate destroys margin instead of creating it. Selling a Paralegal SKU into an hourly firm is asking them to convert revenue into cost.

In a contingency or flat-fee firm, the same paralegal is a *pure cost centre*. Nothing that person does is billed to anyone. Every hour moved from a US payroll to a $13/hr seat drops straight to the partner's distribution. Same SKU, opposite economics.

FEE MODEL 01	FEE MODEL 02	FEE MODEL 03
Contingency	**Flat fee**	**Hourly**
TIER 1 — ALL SKUS	TIER 1 — ALL SKUS	TIER 3 — NON-BILLABLE ONLY
SUPPORT STAFF IS Overhead against a fee earned months later. Payroll runs every two weeks; settlements don't. SELL Every SKU. Demand Writer and Lien Negotiator convert fastest because each one visibly accelerates cash.	SUPPORT STAFF IS A direct subtraction from a fee that is already fixed. Every extra hour on a matter reduces the margin on that matter. SELL Every SKU. Document-heavy, form-driven work is the wedge — immigration especially.	SUPPORT STAFF IS Billable inventory. Paralegal hours are resold to the client at a 3–4× markup. SELL Only what can never be billed: **Bookkeeper, Marketing Specialist, Intake Specialist, Document Collector**. Never lead with Paralegal.

> THE ONE-LINE QUALIFIER
>
> Before a rep spends a minute on an account: **does this firm bill the client for its paralegal's time?** If yes, the deal is small and the wrong SKU will kill it. If no, the entire catalogue is available and the arithmetic sells itself.

This also explains a pattern sitting in plain sight on the site's own testimonial wall. Alongside the personal-injury names sit **lemon-law and employment firms** — Help with Lemons, Robison Lemon Law Group, Termechi Employment Law. Those are fee-shifting practices: the defendant pays the fees, so support staff is overhead exactly as in contingency work. Fee-shifting litigation is a proven, under-named segment that is already buying.

§4 Tiers and machine-readable filters

SEGMENT TIERS · RANKED BY CLOSE PROBABILITY × ACCOUNT SIZE

TIER	SEGMENT	WHY IT BUYS	LEAD SKU	SEATS
1A CORE	**Personal injury & mass tort** 2–20 attorneys · contingency	Case volume scales faster than payroll can. Records, liens and demands are unbilled labour standing between the firm and its fee.	Demand Writer then Document Collector	2–5
1B CORE	**Immigration** flat fee · high Spanish-language need	Fixed fee per matter against enormous form and document volume. Legal Soft's four LatAm offices staff native Spanish speakers on US hours — a structural edge over Philippines-only rivals.	Bilingual Legal Assistant	1–3
2 EXPAND	**Fee-shifting litigation** employment · lemon law · workers' comp · SSDI · consumer	Same overhead economics as contingency, a fraction of the competitive noise. Already present in the testimonial wall but absent from the messaging.	Case Manager	1–3
3 VOLUME	**Flat-fee volume practices** bankruptcy · criminal defence · estate planning · family	Predictable fee, repetitive document work, thin margins. Buys one seat readily; expands slowly.	Legal Assistant	1–2
4 NARROW	**Hourly practices** business · real estate · tax · IP	Only non-billable functions are sellable. Real but capped — do not spend Tier-1 effort here.	Bookkeeper / Marketing	1
— SUPPRESS	**Disqualified**	50+ attorneys (procurement, InfoSec review, incumbent ALSP) · in-house legal departments · government · non-US · firms under two years old or under ~$300k revenue · current customers of a direct rival	—	0

Filter spec for the list build

Everything below should be expressible as a query, not a judgement call. Anything that cannot be belongs in enrichment, not in targeting.

TARGETING FILTERS · HARD GATES AND SCORING INPUTS

ATTRIBUTE	INCLUDE	WHERE IT COMES FROM
Entity type	Private US law firm	State bar directories, Justia, Avvo, Martindale
Attorney count	1–25 (sweet spot 2–12)	Firm site team page, LinkedIn headcount, bar records
Fee model	Contingency · flat fee · fee-shifting	Inferred from practice area plus "no fee unless we win" / "flat fee" on the site
Practice area	Tier 1A / 1B / 2 / 3 above	Site nav, Google Business Profile category, directory taxonomy
Geography	US only. Weight CA, TX, FL, NY, GA, AZ, NV, IL, NJ, CO	Matches the existing customer concentration — 13 of 22 public testimonials are Californian
Spanish-language need	Site has an `/es` path or "Hablamos Español"	Crawl. Routes directly to the LatAm advantage
Case management system	Filevine · CASEpeer · Clio · MyCase · Litify · SmartAdvocate	BuiltWith / Wappalyzer / careers-page mentions
Paid acquisition	Active Google Ads, Local Services or Meta ads	Google Ads Transparency Center, Meta Ad Library

Universe size

The US has roughly **50,400 personal-injury firms**, of which about 60% are solo, and small firms of ten attorneys or fewer handle around 70% of all PI cases. Filtering to 2–25 attorney PI and mass-tort firms leaves an addressable core in the region of **13,000–16,000** firms. Legal Soft's existing 1,000 accounts therefore represent single-digit penetration of its own core segment — before Tier 1B, 2 and 3 are counted at all.

> DO NOT GUESS THE REST
>
> The PI count is a published figure. Immigration, employment and family-law firm counts should be *built* from state bar directories during the list phase, not estimated. A TAM slide with an invented denominator will be the first thing a sceptical operator picks apart.

§5 The buying committee

In a 2–20 attorney firm there is no procurement, no security questionnaire, and no committee in the enterprise sense. There is an owner who signs, an operator who feels the pain, and a person who quietly kills the deal.

ROLES, MOTIVES, AND THE THING EACH ONE ACTUALLY SAYS

ROLE	WHO	WHAT THEY WANT	WHAT THEY SAY
Economic buyer	Managing partner / owner. Usually the founder, usually named on the door.	Take home more money. Get weekends back. Add case volume without W-2 risk, unemployment insurance or a lease.	*"I can't find anyone, and I can't afford to be wrong twice."*
Champion	Firm administrator / office manager / director of operations. Appears above roughly eight staff.	Stop drowning. They are the person who posted the req that got no applicants — they will forward a relevant email the same day.	*"I've been covering intake myself for six weeks."*
Blocker	Senior in-house paralegal, or the attorney's own risk instinct.	Not to be replaced. Not to be the partner who put client PHI on an offshore laptop.	*"Are we even allowed to do this?"*
Influencer	The firm's marketing agency and coach — Rankings.io, RizeUp, OnTrac, Pilmma, My Legal Academy.	Their client to convert more of the leads they are already generating.	*"Your intake is the bottleneck, not your ads."*

TWO MOVES THE PERSONA MAP HANDS YOU

Neutralise the blocker in the first email. Frame every placement as added capacity, never as replacement. The in-house paralegal who fears the pitch is often the one reading the owner's inbox.

The influencers are already partners. Sixteen agencies and coaches are listed on `/partners`, and the alliance program pays recurring commission. An agency whose PI client is buying leads that go unanswered has a commercial reason to make the introduction — their own campaign performance depends on it. This is the cheapest channel in the model and it is currently a logo wall.

§6 The signal board

Law firms do not buy at a revenue threshold. They buy at a moment. The engine's entire job is to detect that moment within days of it happening — because the alternative is a 60-day local hiring process that ends in a hire, and the window closes.

Signals are ranked by intent strength, not by how easy they are to collect. The weight column feeds directly into §7.

BUYING SIGNALS · RANKED BY INTENT · WEIGHT FEEDS THE SCORING MODEL

#	SIGNAL	WHAT IT PROVES	SOURCE	WEIGHT	ACT WITHIN
01	**Legal-support job posting open >21 days** STRONGEST Paralegal, legal assistant, case manager, intake specialist	Budget approved, demand published, *and local hiring has failed*. Paralegal unemployment sits near 1.9% — this firm will not fill the role.	Indeed, ZipRecruiter, LinkedIn Jobs, Google Jobs, firm careers page	40	24 hrs
02	**Same posting, live <7 days**	In-market right now, still optimistic about hiring locally. Earlier in the window, lower urgency.	Same	30	72 hrs
03	**Inbound: pricing page or tool used**	Self-identified. Already comparing cost.	Site analytics plus reverse-IP / form capture	25	Same day
04	**Google reviews citing unreturned calls** UNDER-USED "never called back", "couldn't reach anyone", "no response"	Documented intake failure, in the firm's own public record. In PI this is signed cases walking to the firm that answered.	Google Places API review text, last 90 days	15	1 week
05	**Two or more simultaneous openings**	Expansion, not backfill. A multi-seat deal.	Job boards, deduplicated by firm	10	72 hrs
06	**Heavy paid acquisition**	Buying leads faster than staff can work them. Every unanswered call is a paid lead wasted twice.	Google Ads Transparency Center, Meta Ad Library, SEMrush	10	2 weeks
07	**Joined a mass tort campaign** Advertising a specific tort or litigation	Thousands of claimants inbound, each needing four to six provider record requests. Pure Document Collector demand, at volume, on a deadline.	Ad libraries, tort-specific landing pages, litigation news	10	2 weeks
08	**New office or lateral attorney hire**	Capacity added at the top with no support beneath it. Infrastructure spend already approved.	LinkedIn company updates, Google Business Profile, legal press	8	3 weeks
09	**Case management system implemented in last 6 months**	A new CMS is when a firm discovers the workflow needed a person, not a feature. Legal Soft partners with both Filevine and Clio — this is a co-sell, not a cold call.	BuiltWith change log, partner referral, tooling named in job posts	8	3 weeks
10	**Partner or alliance introduction**	Warm, pre-qualified, and the referrer is financially motivated to close it.	Partner portal	35	Same day

SIGNAL 01 IS THE WHOLE BUSINESS

A law firm with a stale paralegal req is not a prospect who might one day need this. It is a firm that has *already decided to buy*, published the budget, and failed to find supply. Legal Soft's entire pitch — legal-trained, three days, $2,922 against a US market rate of roughly $7,185 — is the exact answer to the exact question that firm is currently failing to answer.

There were about **24,300 paralegal postings** and **68,200 legal-operations postings** in the US over the last cycle. Even after filtering to law firms in the target practice areas and sizes, that is roughly **1,200 qualified in-market accounts per month** — arriving continuously, for free, with a timestamp on each one.

NEGATIVE SIGNALS — SUPPRESS ON SIGHT

- 50+ attorneys, or any AmLaw / NLJ ranking
- A careers page listing an in-house recruiter — they have hiring capacity and will use it
- An existing offshore or ALSP vendor named on the site
- Exclusively hourly corporate, tax or IP practice *and* no non-billable role open
- Firm founded under 24 months ago, single attorney, no paid advertising — no budget
- Government, in-house legal department, non-US

§7 Scoring model and routing

Two independent scores, never merged into one number until the routing step. **Fit** answers *should we ever sell to them*. **Intent** answers *should we call them today*. A perfect-fit firm with no intent is a nurture contact, not a call — and treating it as a call is how outbound teams burn their best accounts.

FIT SCORE · 0–50

ATTRIBUTE	PTS
Contingency or flat-fee model	+15
PI or mass tort	+10
Immigration, employment, lemon law, comp, SSDI	+8
Family, bankruptcy, criminal, estate	+5
2–12 attorneys	+12
13–25 attorneys	+8
Solo	+5
US-based	+6
Concentration state (CA/TX/FL/NY/GA/AZ/NV)	+2
Spanish-language need detected	+5
26–50 attorneys	−10
50+ attorneys, hourly-only, non-US	disqualify

INTENT SCORE · 0–50

SIGNAL	PTS
Job posting open >21 days	+40
Partner / alliance introduction	+35
Job posting live <7 days	+30
Pricing page visit or tool used	+25
Reviews citing unreturned calls	+15
Two or more simultaneous openings	+10
Active paid acquisition	+10
Mass tort campaign detected	+10
New office or lateral hire	+8
CMS implemented in last 6 months	+8
No signal in 90 days	decay −5/mo

ROUTING BANDS · COMBINED SCORE SETS CHANNEL AND SPEED, NOTHING ELSE

SCORE	BAND	TREATMENT	OWNER
80+	STRIKE	Researched call the same day. Personalised email citing the specific posting or review. LinkedIn touch to owner *and* administrator. Five touches over eight days.	Senior SDR
60–79	SEQUENCE	Signal-triggered multichannel sequence, nine touches over 21 days. Call attempts on days 1, 4 and 11.	SDR pool
40–59	NURTURE	Segment newsletter and role-specific content. Re-scored nightly; promotes automatically the moment a signal fires.	Automated
<40	SUPPRESS	Held in the database, contacted by nobody. Re-enters only on a fit change or a Tier-1 signal.	—

§8 Engine architecture

Seven stages. Stages 2 and 3 run nightly against the whole universe; everything else is event-driven off a score change.

01	**Universe**	Build and hold the master list of US law firms once. This is an asset, not a campaign — it compounds, and it is the thing a competitor cannot copy quickly.	IN State bar directories · Justia · Avvo · Martindale · Google Places OUT Firm record: name, site, address, attorneys, practice areas, fee model
02	**Sense**	Sweep every signal source nightly. Match hits back to firm records by domain and address, not by name — firm names collide constantly.	IN Job boards · careers pages · ad libraries · review APIs · LinkedIn · BuiltWith OUT Timestamped signal events attached to firm records
03	**Score**	Recompute fit and intent nightly. Intent decays; fit does not. A crossed band is the event that drives everything downstream.	IN Firm record + signal events OUT Fit 0–50, Intent 0–50, band, band-change event
04	**Enrich**	Only for accounts crossing into Sequence or Strike. Enriching the whole universe is the single largest avoidable cost in this model.	IN Band-change event OUT Owner and administrator: name, title, work email, direct line, LinkedIn
05	**Compose**	The signal picks the message and the wedge SKU. A stale paralegal req gets the hiring-failure angle; an intake-failure review gets the lost-case angle. Never one template with a merge field.	IN Top signal + segment + fee model OUT Sequence variant, wedge SKU, opening line citing the specific evidence
06	**Engage**	Email, phone and LinkedIn on the cadence set by the band. A reply of any kind pauses automation and hands the account to a human immediately.	IN Sequenced account OUT Replies, meetings booked, free interviews scheduled
07	**Learn**	Attribute every closed firm back to its originating signal, then re-weight §7. The scoring table is a hypothesis; after 90 days of outcomes it should no longer look like the one above.	IN Closed-won and closed-lost with originating signal OUT Revised weights, retired signals, new sources

SEQUENCING WARNING

Build stages 1–3 before writing a single email. A team that starts at stage 6 ends up spraying a purchased list, which produces the CAC of a $200-ACV business against a $35,900-ACV product. The engine's advantage lives entirely in stages 2 and 3.

§9 Message matrix

One rule: the first line must contain something the sender could only know by looking at that specific firm. Everything else is negotiable.

`SIGNAL 01 · STALE REQ` **your paralegal req — still open?**

Saw the paralegal role at `[Firm]` has been posted since `[date]`.

Paralegal unemployment is running near 1.9% nationally — most PI firms we talk to are 60 to 90 days in with no shortlist worth interviewing. That's a quarter of a caseload sitting on someone's desk.

We place legal-trained paralegals in under three days, at $2,922/mo, month-to-month. Trained in `[their CMS]` before day one.

Worth fifteen minutes before you re-post?

`SIGNAL 04 · INTAKE FAILURE` **three reviews mention nobody called back**

Three of `[Firm]`'s recent Google reviews say the caller never heard back — one of them: `"[review fragment]"`.

In PI that isn't a service problem. It's a signed case going to whoever answered second.

A bilingual intake specialist covering overflow and after-hours runs $2,227/mo. If you're spending anything meaningful on ads, the first recovered case pays for the year.

`SIGNAL 06 · PAID ACQUISITION` **buying leads faster than you can work them**

You're running `[N]` ad groups on `[city]` accident terms plus a Local Services listing.

At that spend the constraint is almost never lead volume. It's the calls that land at 6:40pm on a Friday.

One recovered signed case a month covers an intake specialist several times over. Happy to show you what the after-hours coverage actually looks like.

`SIGNAL 07 · MASS TORT` **[tort] — the records volume**

Saw `[Firm]` is signing `[tort]` claimants.

Four to six provider requests per claimant, every one of them unbilled, all of them standing between you and the fee.

Document collectors at $2,227/mo, deployed in three days. The docket scales; your payroll doesn't have to.

TIER 1B · IMMIGRATION + SPANISH **Spanish-speaking legal assistant, on your hours**

[Firm] runs a Spanish-language intake page, so this is probably relevant.

Our Mexico, Colombia, Ecuador and Nicaragua offices staff native Spanish speakers on US business hours — not a Manila night shift with a US-hours label on it.

On flat-fee immigration work every hour moved off US payroll is margin on that matter, not a billing question. Starts at $2,227/mo.

THE ROI LINE THAT ACTUALLY CONVERTS PI OWNERS

Do not lead with 60% savings. Lead with recovered revenue. **One additional signed case per month, at a typical PI attorney fee, is roughly $144,000 a year against a $26,724 intake specialist.** Cost savings argue about overhead. Recovered cases argue about the thing the owner already lies awake over.

§10 Objections, and the ones competitors will plant

HANDLING MATRIX · EVERY REP SHOULD HAVE THESE COLD

OBJECTION	WHAT IS REALLY BEING ASKED	HANDLE
"Are we even allowed to do this?"	Bar-rule and malpractice exposure.	ABA Formal Opinion 08-451 addresses outsourcing legal and non-legal support work, subject to supervision, confidentiality safeguards and — where warranted — client disclosure. Confirm the specific state rule; do not overstate it. Send the compliance pages rather than arguing.
"Client data offshore?"	PHI in a PI case; a HIPAA breach headline.	HIPAA-compliant staffing and a documented data-protection posture already exist on site. Reinforce with a back-office wedge that touches records inside the firm's own CMS, never on local storage.
"My clients will notice."	Accent, and elderly or injured claimants.	Do not fight it — route around it. Open with Document Collector, Lien Negotiator or Demand Writer: zero client contact. Let the firm raise client-facing roles once trust exists.
"I tried a VA and it failed."	They were sold a generalist from a marketplace.	Different category: dedicated, legal-trained, US-attorney-supervised training, monitored on-platform, free replacement. Name the failure mode they actually experienced and explain which of those four addresses it.
"Time zones." PLANTED	A named competitor attacks Philippines coverage as "shifted US hours".	Lead LatAm. Mexico, Colombia, Ecuador and Nicaragua sit natively within US business hours. This objection becomes a differentiator the moment it is raised.
"The platform is redundant." PLANTED	Same competitor: firms already run Clio or Filevine.	The platform manages the *employee* — timesheets, invoicing, bonuses, escalation. The CMS manages the *case*. Staff work inside the firm's CMS. Both are true and they do not overlap.
"Three days is too fast to vet." PLANTED	Fast placement implies shallow matching.	The vetting happened before the firm arrived — 600+ pre-vetted candidates on the bench, top 1% of applicants. Three days is time-to-start, not time-to-screen. Close with the replacement guarantee.
"This will upset my paralegal."	The blocker, speaking through the owner.	Capacity, never replacement. Position the placement as reporting to the senior paralegal — the blocker becomes the supervisor and the objection inverts.

§11 Funnel math

Modelled on signal-triggered outbound only — no inbound, no partner channel. Both of those sit on top of this.

MONTHLY FUNNEL · CONSERVATIVE AND TARGET CASES

STAGE	CONSERVATIVE	TARGET	ASSUMPTION
Tier-1 signal accounts detected	1,200	1,200	~5,700 monthly legal-ops postings, filtered to law firms in target segments
Contactable after enrichment	840	900	70–75% owner or administrator reachable
Entered into sequence	840	900	All contactable
Positive replies	59	99	7% vs 11% — signal-relevant outbound, not cold spray
Meetings held	25	41	3.0% vs 4.5% of sequenced
Free interviews scheduled	13	25	50–60% of meetings — the free-interview offer is unusually low friction
Placements (new firms)	5	11	40–45% of interviews
New ARR added	$180k	$395k	At $35,900 ACV

ANNUALISED · ONE CHANNEL

LINE	CONSERVATIVE	TARGET
New firms per year	60	132
New ARR	$2.15M	$4.74M
Engine cost 2 SDRs, data, tooling, ops	$220k	$260k
Blended CAC	$3,667	$1,970
Against published allowable CAC of $2,500	OVER	UNDER
Year-one gross profit : CAC	4.9 : 1	9.1 : 1

Even the conservative case clears a healthy return, and the difference between the two columns is almost entirely reply rate — which is a function of how specific the first line is, which is a function of stages 2 and 3. That is the argument for building the signal layer properly rather than buying a list.

INSTRUMENT THESE FOUR, AND LITTLE ELSE

- **Signal-to-contact latency** — hours between a posting going live and the first touch. The strongest single predictor of reply rate in this model.
- **Reply rate by signal type** — this is what re-weights §7. Expect at least one signal to underperform badly and one to surprise.
- **Interview-to-placement rate by wedge SKU** — validates or kills the back-office-first thesis in §1.
- **Seats per account at day 90** — expansion is where the ACV assumption is proven or broken.

§12 What the current site is costing them

Seven findings from the audit that directly affect lead generation. Each is cheap to fix, and each is currently leaking qualified demand.

FINDINGS · ORDERED BY REVENUE IMPACT

#	FINDING	WHY IT COSTS MONEY
01	**The highest-intent pages on the site are unmonetised**	"20 Legal Intake Specialist Interview Questions", "39 Law Firm Interview Questions", "How to Hire a Legal Secretary" — every reader of those pages is *actively hiring right now*. That is Signal 01 arriving voluntarily, and the pages offer a newsletter box. Each should carry a role-specific offer: *"Still interviewing? We have three pre-vetted intake specialists available this week."*
02	**Case studies are anonymous and carry no narrative**	Nine entries with dollar figures, no firm names, no problem statement, no method. A sceptical PI owner reads "$1.5M saved · San Francisco · Enterprise" as invented, and outbound proof is exactly where credibility is thinnest. There are 22 named testimonials on the site — that is the pool. Three named, filmed PI case studies with before-and-after would carry the entire engine.
03	**Three different savings numbers for the same claim**	60% on the homepage and about page, 70% on the intake specialist page, "up to 80%" on the personal injury page. A prospect who reads two pages finds the inconsistency, and the number stops working. Pick one, source it, use it everywhere.
04	**The client screener tool is a growth asset being used as page filler**	"Free Client Screeners by Practice Area" sits on the *prospect's own website* capturing *their* intake. It should require a work email, and it should report back: *"You received 43 screener submissions last month. Twelve arrived after 6pm."* That is the firm's own data proving the intake problem — the strongest possible lead magnet in this category, currently ungated and unmeasured.
05	**The platform page names zero integrations**	Role pages name Clio, Filevine, MyCase, CASEpeer, Practice Panther, Rocket Matter, NetDocuments, Leap and Eclipse. The platform page names none — which is precisely where a competitor's "redundant platform" attack lands. The integration story is the rebuttal, and it is missing from the page that needs it.
06	**"600+ signed up" is displayed as social proof**	It is a newsletter count sitting next to "1,000+ law firms served". The smaller number reframes the larger one as soft. Remove it.
07	**Pricing has no anchor**	$2,227/mo means nothing in isolation. The intake page already cites a US in-house average of $7,185/mo — that comparison belongs on the pricing page, in the table, on every row.

§13 First 30 days

Ordered so each week produces something the next week needs. Nothing here requires the full engine to exist.

WEEK	BUILD	DONE WHEN
1	Stand up the job-signal sweep for Tier 1A only — PI and mass tort, 2–25 attorneys, top ten states. One source is enough to start; Indeed alone will do.	A daily list of firms with an open legal-support req, deduplicated and matched to a firm record.
2	Enrich the top 200 by hand. Owner and administrator, email and direct line. Write the five sequences in §9 against real firms, not templates.	200 accounts contactable; five sequences written and reviewed.
3	Run it manually. One rep, 200 accounts, every first line written against the actual posting. Log signal-to-contact latency on every one.	Reply rate measured per signal-age bracket — under 7 days versus over 21.
4	Re-weight §7 against real replies. Add the review-mining signal. Only now decide what to automate — and automate the part that worked.	A scoring table backed by outcomes, and a defensible case for the engine build.

> THE ONE THING TO GET RIGHT
>
> Every part of this document is a hypothesis except one: **a law firm with a stale legal-support job posting is already trying to buy what Legal Soft sells, and cannot find it locally at any price.** Roughly 1,200 of them appear every month, timestamped and free to detect. Build the engine that reaches them first, and the rest is optimisation.

Sources · legalsoft.com (home, platform, pricing, about, case studies, partners, referral program, blog, tools, practice-area and role pages) · IBISWorld US personal-injury firm counts · Robert Half 2026 legal hiring data · competitor positioning per getstaffedup.com

Figures in italics are derived estimates, not published by Legal Soft. Funnel projections are models, not forecasts. Bar-rule guidance is a starting reference only — confirm the applicable state rule before using it in a sales conversation.
